Arunn Narasimhan

<i>Foreword I</i>	iii
<i>Foreword II</i>	vii
<i>Preface</i>	ix
<i>Acknowledgements</i>	xiii
1. Basic Concepts	1
1.1 Porous Medium Definition	1
1.1.1 Non-Traditional Examples	3
1.1.2 Bi-Disperse Porous Medium (BDPM)	5
1.1.3 Porous Bio-Materials	6
1.2 Porosity	8
1.2.1 Volumetric Porosity	8
1.2.2 Surface Porosity	8
1.3 Percolation and Tortuosity	9
1.3.1 Percolation	10
1.3.2 Tortuosity	11
1.4 Volume Averaging Procedure	12
1.4.1 Homogeneous Porous Medium	12
1.4.2 Representative Elemental Volume	15
1.4.3 Some Clarifications on REV's	16
1.5 Problems	18
2. Heat Conduction in Porous Medium	23
2.1 Introduction	23
2.2 First Law of Thermodynamics	23
2.2.1 Local Thermal Equilibrium	29
2.2.2 Porous Medium Energy Equation	30
2.3 Second Law of Thermodynamics	31
2.4 Effective Stagnant Thermal Conductivity	32
2.4.1 Limiting Models	32
2.4.2 Other Models	34
2.4.3 Experimental Determination	40

2.4.4	Description of SGHP Apparatus	41
2.4.5	Determination of k_e	42
2.5	Thermal Dispersion	42
2.6	Local Thermal Non-Equilibrium Model	44
2.6.1	LTNE Formulation of PM Energy Equation	44
2.6.2	Interface Heat Transfer Coefficient	45
2.7	Transient Heat Conduction in Porous Medium . . .	47
2.7.1	1D Transient PM Heat Conduction under LTE	47
2.7.2	Lumped Capacitance Model	49
2.7.3	1D Transient PM Heat Conduction under LTNE	51
2.8	Problems	53
3.	Fluid Flow through a Porous Medium	57
3.1	Introduction	57
3.2	Historical Overview	59
3.2.1	Darcy Model	59
3.2.2	Hazen-Dupuit-Darcy Model	62
3.3	Physics of Flow through Porous Media	65
3.3.1	Inertia-less Motion and the HDD model . . .	66
3.3.2	From Newton's Principia to the Nature of Form Drag	69
3.4	Extensions of the HDD Model	76
3.4.1	Brinkman Model	76
3.4.2	Generalized Momentum Equation	78
3.5	Permeability and Form Coefficient	80
3.5.1	Analytical Estimates	80
3.5.2	Fictitious Porous Media	81
3.5.3	Experimental Determination	83
3.5.4	Viscometry and Permeametry	90
3.5.5	Protocol for Permeability Measurement . . .	91
3.6	Flow Transition	97
3.6.1	What is Transition?	97
3.6.2	Characterization of the Transition	98
3.6.3	Prediction of Transition	100
3.6.4	PM Transition Flow and Turbulent Flow . .	102

3.7	Miscellaneous Topics	103
3.7.1	Hydrodynamic Boundary Layer	103
3.7.2	Wall Channelling	104
3.7.3	Porosity and Permeability	105
3.7.4	Secondary Effect in the Determination of K and C	106
3.7.5	Boundary and Interface Conditions	108
3.8	Problems	112
4.	Forced Convection through Porous Medium	117
4.1	Energy Equation with Flow	117
4.1.1	Local Thermal Non-Equilibrium (LTNE) Situation	118
4.1.2	Local Thermal Equilibrium (LTE) Situation	119
4.2	Forced Convection in Porous Medium over a Flat Plate	120
4.3	Forced Convection in Porous Medium Channel . . .	125
4.3.1	Bulk Temperature	125
4.3.2	Nusselt Numbers	128
4.3.3	Channel Filled with Porous Medium	130
4.3.4	A Measurable Nu	131
4.4	Heat Transfer Enhancement Aspects	134
4.4.1	Basic Configurations	135
4.4.2	Heat Exchangers as Porous Media	139
4.4.3	Porous Medium Inter-connectors	140
4.5	Other Forced Convection Configurations	148
4.6	Viscous Dissipation Effects	149
4.7	Problems	152
5.	Natural Convection through Porous Medium	157
5.1	Natural Convection Boundary Layers	157
5.1.1	Vertical Wall	157
5.1.2	Horizontal Wall	162
5.2	Natural Convection with Vertical Thermal Gradient	162
5.2.1	Onset of Natural Convection	162
5.2.2	Experimental Results	166

5.3	Natural Convection with Horizontal Thermal Gradient	167
5.3.1	Isothermal Side-Wall Heated Configuration .	167
5.3.2	Iso-flux Side-Wall Heated Configuration . . .	171
5.3.3	High Ra Results	172
5.4	Heatline Visualization	173
5.5	Non-Darcy, LTNE and Heat Generation Effects . . .	176
5.5.1	Governing Equations	177
5.5.2	Boundary Conditions	180
5.5.3	Departure from Darcy Flow Effects	182
5.5.4	Heat Generation Effect	183
5.5.5	Prediction of Critical Internal Heat Generation	184
5.5.6	Correlation for Nu in Porous Annulus	186
5.6	Viscous Dissipation	187
5.7	Problems	188
6.	Porous Medium Aspects of Biological Systems	189
6.1	Introduction to Biothermofluids	189
6.2	Porous Medium Modelling in Bio-heat Transport . .	191
6.2.1	Chen and Holmes Bio-Heat Model	192
6.2.2	Porous Medium Bio-Heat Model with LTNE	193
6.2.3	Other Recent Models	194
6.3	Modelling Drug Delivery	196
6.3.1	Trans-scleral Porous Medium Model	197
6.3.2	Governing Equations	197
6.3.3	Determination of Porosity and Permeability of the Sclera	199
6.3.4	Boundary conditions	201
6.3.5	Anecortave Acetate Case Study	202
6.3.6	Effect of Choroidal Blood Flow on Drug Diffusion	202
6.3.7	Transdermal Drug Delivery	204
6.4	LDL Transport across Arterial Tissues	204
6.5	Porous Medium Modelling in Bio-mass Transport . .	208
6.5.1	Mass Transport in Tissue Regeneration . . .	208
6.5.2	Porous Medium Model for Lung Diffusion . .	212

6.5.3	Porous Medium Models of Microbial Transport	215
7.	Radiation Heat Transfer in Porous Medium	219
7.1	The Radiative Transfer Equation (RTE)	219
7.2	The Energy Equation with Radiation	220
7.3	Radiative Property Measurement	223
7.4	Solving the RTE	224
7.5	Coupling of RTE with other Heat Transfer Modes	225
8.	Advanced Topics	227
8.1	Phase Change in Porous Media	227
8.1.1	Porous Medium LHTES Device	227
8.1.2	The Enthalpy Model and Governing Equations	228
8.1.3	Effective Properties and Boundary Conditions	230
8.1.4	Exergy Criterion and Optimum ϕ	232
8.1.5	Scale Analysis	233
8.2	Variable Viscosity Porous Medium Flows	237
8.2.1	Temperature Dependent Viscosity Effects	237
8.2.2	Variable Viscosity and HDD Model	238
8.2.3	Limiting Case of the HDD Model	240
8.2.4	Modified HDD Model	240
8.2.5	M-HDD Model Coefficients	241
8.2.6	Hydrodynamics of $\mu(T)$ Flows	243
8.3	Flow and Convection in Bi-disperse Porous Media	246
8.3.1	Laminar Flow through BDPM Channel	247
8.3.2	Governing Equations and Boundary Conditions	248
8.3.3	Effects of Internal Permeability (Da_I)	252
8.3.4	Effects of Macro-pore Volume Fraction (ϕ_E)	253
8.3.5	Natural Convection in BDPM Enclosure	255
8.4	Two-phase Flow through Porous Media	258
8.4.1	Mixture Model Governing Equations	259
8.4.2	Mixture Variables and Coefficients	260
8.4.3	Constitutive Relations	261
8.4.4	Sample Result	264

6	<i>Essentials of Heat and Fluid Flow in Porous Media</i>	
8.5	LBM Formulation for Porous Medium Flows	265
8.5.1	Introduction	265
8.5.2	d2q9 model	266
8.5.3	d2q9i model	268
8.6	Combustion in Inert Porous Media	270
	<i>Suggested Reading</i>	273
	<i>Appendix I: Porosity and Permeability Values</i>	275
	<i>Appendix II: Convection Results and Correlations</i>	277
	<i>Bibliography</i>	289
	<i>Index</i>	301
